

(a) Lengthscale paths

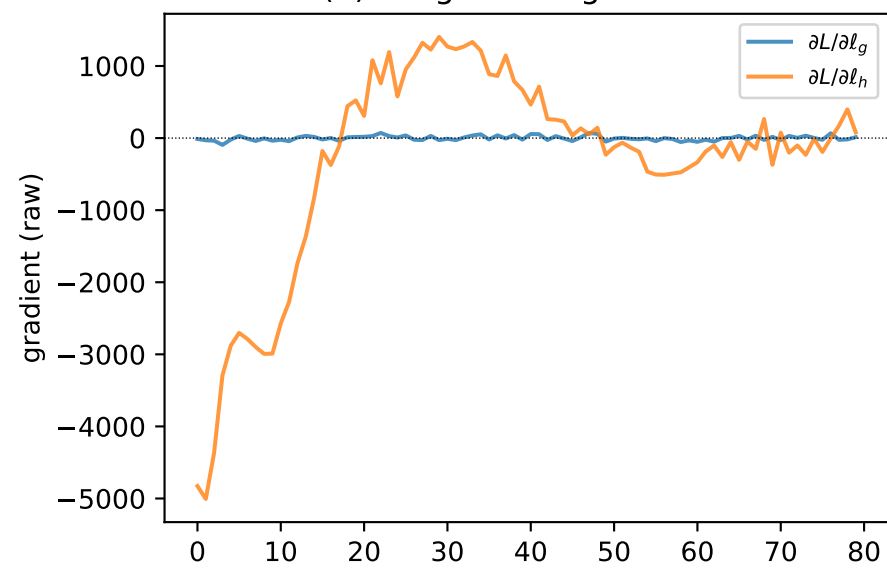

(b) Variance paths

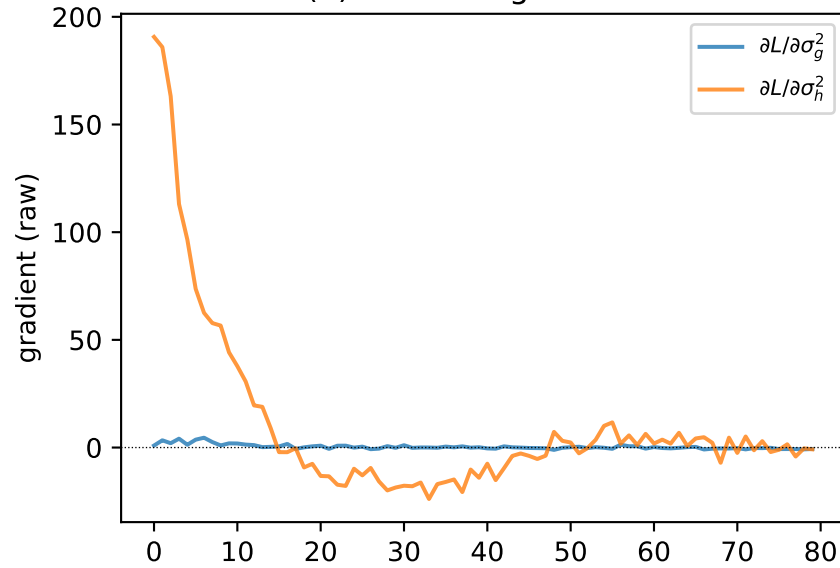

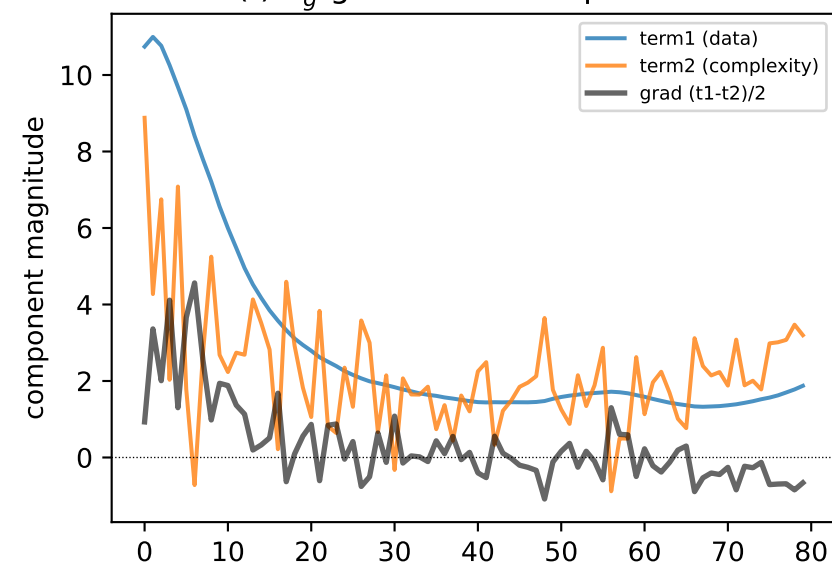

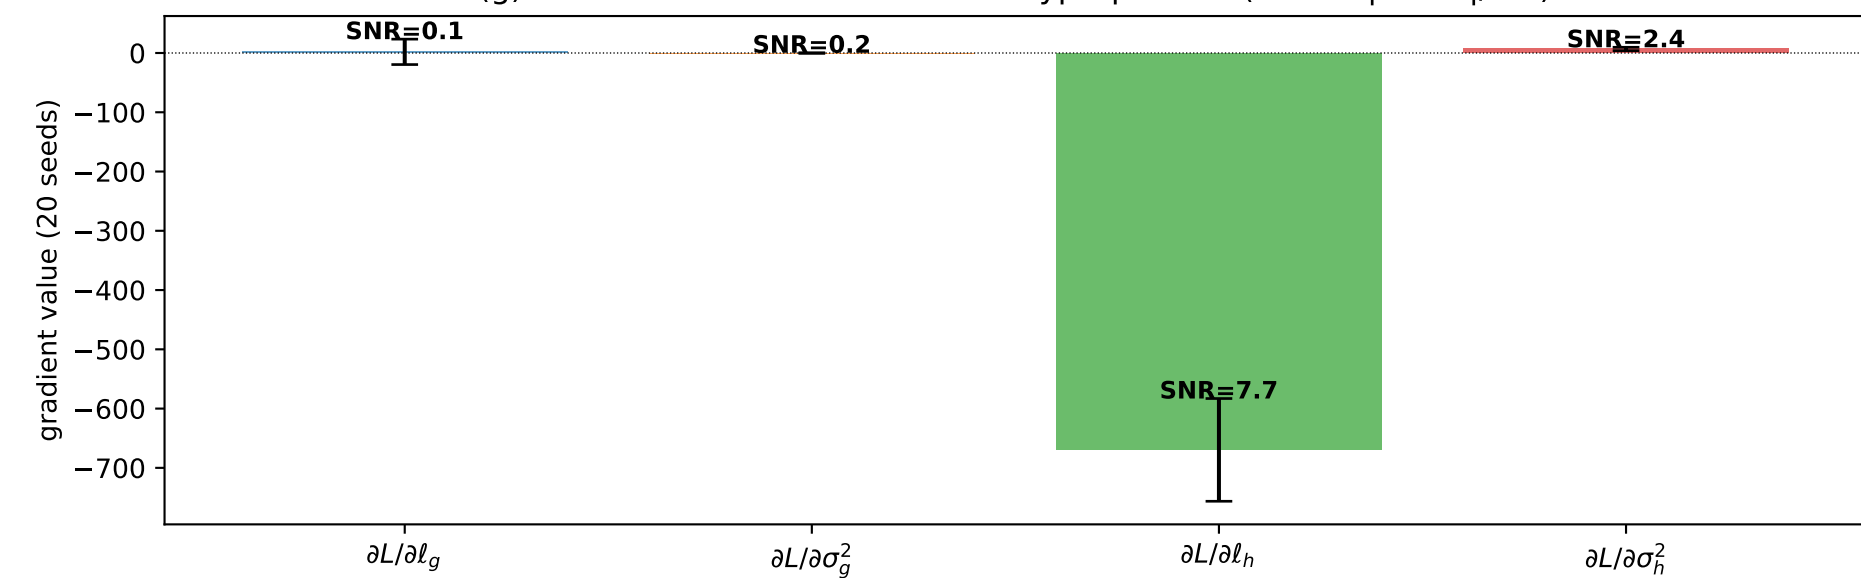

(c) Shape parameter path

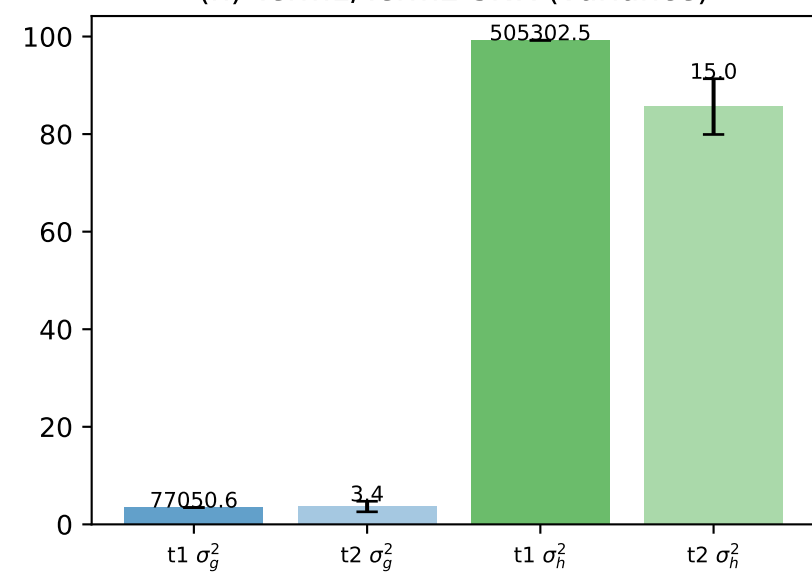

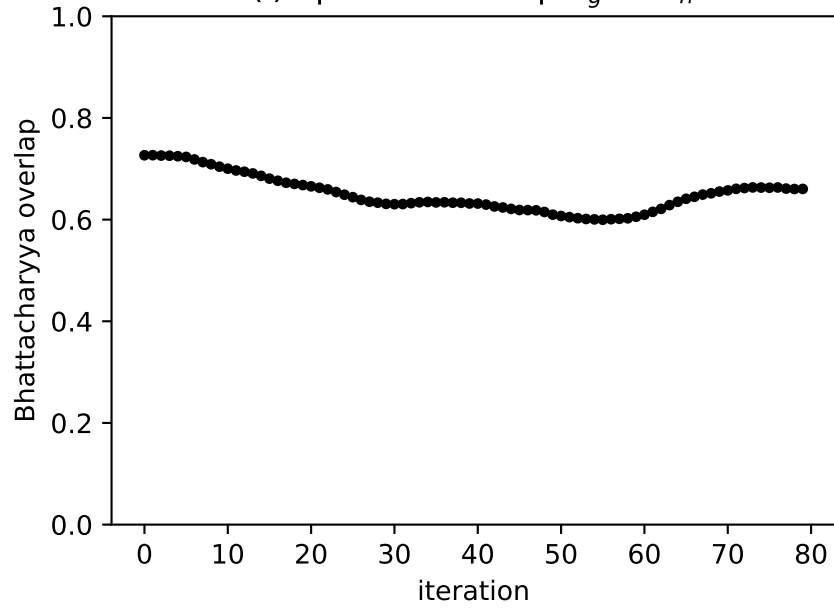

(d) Lengthscale gradients

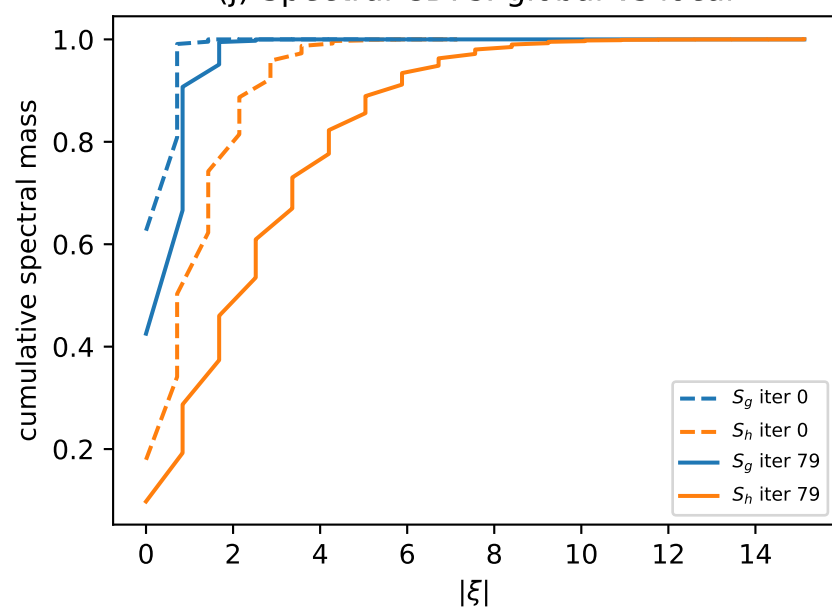

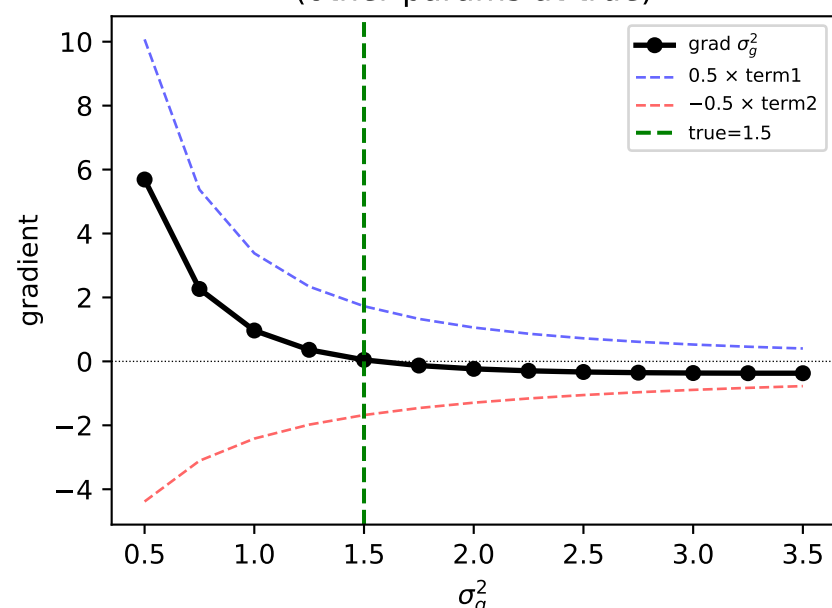

(e) Variance gradients

(f) σ_g^2 gradient decomposition(g) Gradient mean $\pm$ std at TRUE hyperparams (SNR = |mean|/std)

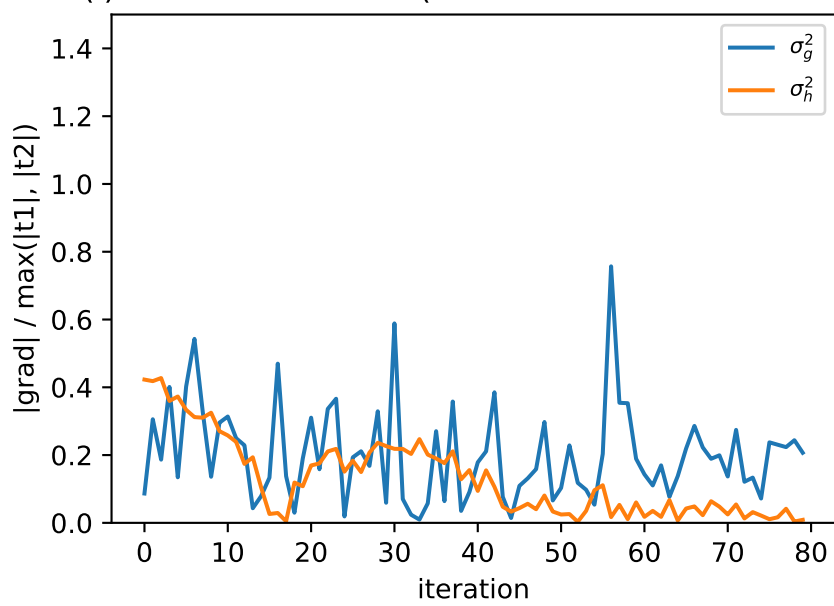

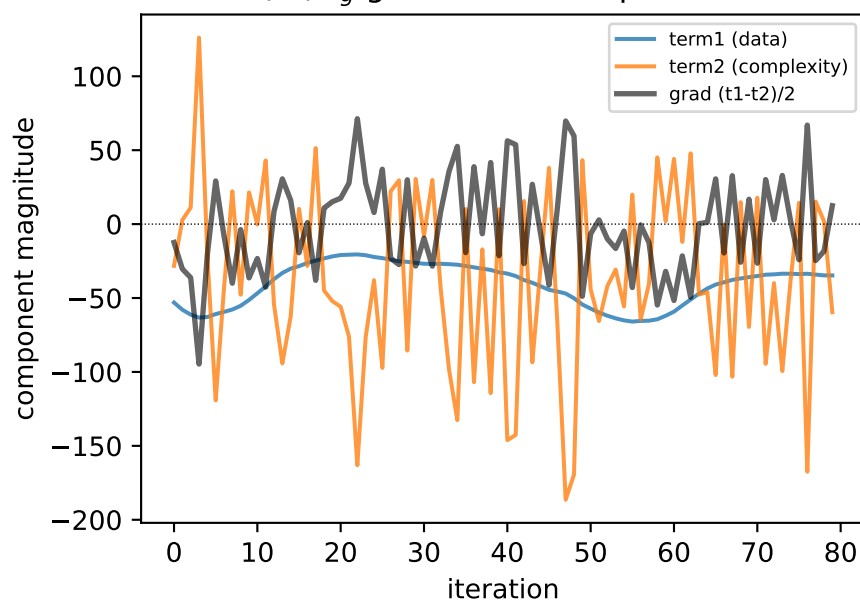

(h) Term1/Term2 SNR (variance)

(i) Spectral overlap S_g vs S_h 

(j) Spectral CDFs: global vs local

(k) $\partial L / \partial \sigma_g^2$ landscape (other params at true)

(l) Cancellation ratio (lower = more cancellation)

(m) ℓ_g gradient decomposition

(n) Gradient magnitudes (log scale)
